

Analysis: We were asked to create a 3x 10 seconds video with sounds. Before I have recorded sounds for more than 20 seconds which inspired me for my final piece and some of the sounds I used in my piece. For my first sound, I made animation first. When I have done the animation I then recorded the sound in my home. In the second video, I recorded the sound of my Laptop because it is very loud when working and I combined this sound with chicken fried on a pan. For the third, I was experimenting with a program with music. I made two illustrations that overlap each other to give a feeling of illusion. I am very happy with the results however, I believe I could more experiment and add some more sounds in the first video.
